DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim 1 is not seen to recite any specific method steps. The specification fails to enable as method lacking any steps.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the language therein not understood. Claim 1 is vague and confusing to the point that the metes and bound thereof cannot be determined. Also, there are no method steps whatsoever seen to be recited. The claim appears to only recite operation for some circuitry, although such is not an apparatus claim. In line 2, the phrase "concluding in that from the current sensor" is not understood. The phrase "concluding in that from" does not at all appear to

correspond to the rest of the recitation and claim language. Also, there is no antecedent for "the current sensor". In line 3, it is not at all understood what is meant by a "PN transition". It appears that this should recite a --transition of a PN junction--, however, such does not recite any location or purpose for the PN junction. Also, there is no antecedent for "the negative feedback". In line 4, the phrase "with which by a former" is not understood. In line 5, it is not understood what is meant by "a bend".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Limberg (USPN 3,534,245). Limberg discloses a circuit, in Fig. 3, that will provide a method of stabilization of operating conditions in electronic devices (312) concluding in that from the current sensor (328, 330 and 334)...a signal of the negative feedback (remainder of the circuit)".
